

There are a lot of good reasons to go with The Professionals.

If you haven't already tried **JET™**, now's a great time to start. For over 30 years, Jet instant-set glues have been favored by those who require industrial-strength bonds and predictable cure times. They also appreciate Jet's ideal viscosities, clog-free tips, and easy-grip, see-through bottles.

What's more, Jet's availability in up to five sizes – 1/4 ounce, 1/2 ounce, 1 ounce, 2 ounces, and 4 ounces – lets you choose the most economical amount for your particular usage. Best of all, Jet's reasonable cost and long shelf life make it a great value.

JET™ CA's. We set the standard.

Why use anything but the best?

INSTANT JET™ sets fastest, usually in 10-20 seconds. Its watery consistency allows it to “wick” into porous material to provide extra reinforcement in the substrate material. It also forms an excellent, corrosive-resistant finish, and is useful both for “tack” gluing and various final bonds.

- #761 ¼ oz.
- #762 ½ oz.
- #763 1 oz.
- #764 2 oz.

JET SET™ is an accelerator for use with most brands of cyano-acrylate adhesives. Once pieces are properly positioned, this creates an instant bond. Available in a non-aerosol pump spray and an 8-oz. refill.

- #777 2 oz. Pump bottle
- #778 8oz. Refill

Medium viscosity SUPER JET™, with its exceptional strength and gap-filling capabilities, is ideal for nearly all instant-bond situations. Recommended for use on wood (including hard woods), metals, ceramics, rubber, most plastics, leather, and some fabrics. Usually sets in 15-45 seconds. SUPER JET™ is also available in a no-spill, brush-on bottle.

- #766 ¼ oz.
- #767 ½ oz.
- #768 1 oz.
- #769 2 oz.
- #770 4 oz.
- #771 ½ oz. Brush On

JET TIPS™ are fine-bore, clog resistant nozzle extensions for precise CA application. The tips are cut on an angle and release one drop at a time.

- #787 Custom Bulk Pack
- #788 6-Pack

JET PAK™ Cap and Tips include a spare cap which fits all sizes of JET™ CA bottles, five sizes of tips, and 12” of capillary tubing.

- #789 Cap & Accessories

The “thickest” version, SLOW JET™, provides maximum gap-filling, extra strength for laminations and high-stress areas, and allows a few extra seconds for repositioning. 1-2 minute set time may be hastened with JET SET™ accelerator.

- #772 ¼ oz.
- #773 1 oz.
- #774 2 oz.

JET™ EPOXY is 9 ounces of flexible, corrosion-resistant, high strength bonding in two workability formulas. JET™ EPOXY 6 is workable for 3-6 minutes and sets in 10-20 minutes; JET™ EPOXY 20 is workable for 10-20 minutes and sets in 1-2 hours.

- #791 JET™ Epoxy 6
- #792 JET™ Epoxy 20

DE-SOLV™ is a solvent for removing JET™ and other brands of CA. Excellent for clean-up. It may also be used to soften bonds, so that pieces may be separated.

- #781 1 oz.
