

If your plane is worth \$3.00, use a \$3.00 CA. If your plane is worth a bit more, it's time to use **JET™**

Even though most of you know better, some modelers still talk themselves into using "budget brand" CAs by saying "CAs are all the same anyhow, aren't they?"

Well, the fact is, all CA glues are not created equal.

Oh sure, basic CA chemistry is similar, but beyond that, it's like thinking a clunker and Mercedes are the same because they both have four wheels. And when you're about to invest a lot of precious time – not to mention money – in a model, it just doesn't make sense to hold the whole works together with CA glues that can't offer you the kind of security that **JET™** products can.

Consider this. Jet Professional Grade CAs are the *only* CAs developed with the input of a truly experienced modeler, Carl Goldberg. (*He even had a hand in designing the bottle; it's so good others have tried to imitate it.*) As a result, our formulations

and quality control standards have been developed specifically for the tough tests you'll be putting them through. Like high vibration levels, exposure to fuels, and the stresses of severe airloads. Plus our glues are manufactured and packaged right here in the U.S.A., where we can make sure those high standards will be maintained.

So whenever you're tempted to use a cheap CA, just ask yourself if you really want to risk building your plane with a glue that might be nothing more than a repackaged version of the stuff they sell to glue on false fingernails.

Try that. We bet you'll decide to go with Jet every time.

JET™ CA's. Made to do *your* kind of job.
